

# Care Management

improving patient safety and hospital performance  
by integrating case, quality, and risk management

## Performance Overview Profiles (POP)

Available at no cost to all MIDAS+ clients, Performance Overview Profiles (POP) provide comparative data reports for high-level hospital performance measures. These reports are useful for evaluating the distribution of various clinical populations across your organization, changes in case mix index from one year to the next, overall efficiency of care management, and completeness of interface data coming into your MIDAS+ system.

With data updated quarterly and displayed through a secured Web application, this unique tool offers a big-picture view of hospital-wide performance, benchmarked against one of the nation's largest concurrent comparative data sets for acute care hospitals.

Participation in the database requires no software maintenance fees or complex implementation procedures. All it takes is one simple installation of a software mapping tool to identify equivalency terms in your MIDAS+ Dictionaries and 20 minutes with an ACS MIDAS+ staff member, and you'll be ready to participate in the quarterly data harvest that will put this data at your fingertips.

You can access your comparative reports online and stratify comparison data by bed size, region, case mix index, academic teaching status, and nursery level. Comparative trend analysis and statistical process control charts give you powerful information about your hospital's business trends within seconds.

### POP Report Metrics

POP report metrics include:

- Case mix index metrics
- ICD-9 product line profiles
- MDC product line profiles
- Arithmetic and geometric length of stay
- Readmission rates
- Mortality statistics
- Data integrity indicators

*"The ability to obtain quick, reliable, and accurate 'big picture' information about one's hospital is essential in today's healthcare marketplace. The POP reports can provide this valuable information for each of our MIDAS+ client sites at no additional cost.*

*"At ACS MIDAS+ we're not just another software vendor; we partner with our clients to transform their hospital data into meaningful information. It is this level of service and commitment that our clients know and expect from us."*

*Dr. Christopher J. Heller MD, FACS  
Senior Vice President and  
ACS Medical Director
