

## SmarTrack™ Worklists

SmarTrack is a proprietary tool that helps you manage work efficiently and effectively. With SmarTrack, you are able to generate record selection rules using any combination of data fields to customize your care coordination processes. SmarTrack provides the ability to automate existing processes and ensure that critical events are not overlooked. From the corporate risk manager to the quality analyst to the case manager, SmarTrack monitors the details and automatically produces notifications or reminders in the form of worklists when user-defined rules are met.

### Features and Benefits

- Manage work efficiently and effectively
- Customize care coordination through individual rules
- Automate existing processes
- Get notifications and reminders in the form of Worklists
- Define rule-based listings of patients and tasks for daily operations and communication between staff and management, including instructions for each task
- Benefit from automatic Worklist follow-up and new patient notification
- Secure Worklists for specific user access and restrict functionality so users can access data specific to patients appearing on their Worklists
- Define Worklist Rule instructions that users can access directly from their Worklists
- Notify staff of high-risk patients prior to or during encounters
- Automatically document referral information onto Worklists of additional staff members
- Identify patients due for review and provide the forum to refer to others
- Identify patients who meet selection criteria for a Focus Study (core measures, etc.)
- Identify patients with selected medical histories and co-morbidities
- Automate referrals, schedule follow-up dates, and trigger worklist reminders
- Identify patients who have a history of falls, complaints, MRSA, VRE, etc. and are readmitted
- Build rules to notify users via e-mail when a patient has qualified for their Worklist

*"Using the MIDAS+ Risk Management module, along with SmarTrack Worklists, has allowed us to track patients with a history of risk related issues. Nursing staff now know when a patient with a history of falling comes back to any of our facilities, and can adjust their care program accordingly. As a result our patient falls and patient complaints have dropped dramatically. We couldn't do that with any other product."*
