

## Administration

The Administration module allows your organization to define and control user access, identify and create relevant security roles, maintain data integrity, record facility information, and deploy additional assessments as needed. All in a simple, intuitive user environment.

This module is adaptable to your workflow, facilitating system management. Spend less time performing system administration and more time making informed decisions.

### Features & Benefits

- Maintain control of your internal processes and retain your compliance history
- Use defined or custom security roles to facilitate system implementation, control data access, and maintain data integrity
- Deploy on-demand assessment templates for all applicable standards. Alternatively, you can choose specific areas to assess
- Maintain consistent communication and promote progress via e-mail
- Add and modify user information in an intuitive, Windows-style interface
