

Assessments

MIDAS+ JRepository is designed around a unique, customizable workgroup methodology that fosters active participation across an organization and centralizes assessment information for all past, current, and future initiatives.

Users are assigned areas to assess based on their roles and responsibilities. Each user provides a compliance score, comments, and relevant documentation. A dynamic status indicator allows users to quickly identify incomplete tasks and scheduled assignments.

MIDAS+ JRepository facilitates a seamless assessment process. It keeps assessment-related information and supporting information in one central repository, and integrates fluidly with your existing e-mail system. It enhances your ability to quickly and efficiently retrieve the information you need. Security roles keep assessment data available only to users who need it to complete their assigned tasks.

An integrated reporting feature enables you to monitor workgroup progress at multiple levels, research areas of concerns, and summarize data for organizational leadership.

Features & Benefits

- Get updated standards and performance elements from The Joint Commission, CMS, and other applicable agencies automatically, with no need to manually compare versions
- Increase knowledge sharing and proactive collaboration across the organization
- View progress and status at the individual and workgroup level
- Automatically generate Corrective Action Plans when compliance scores are less than satisfactory

"MIDAS+ JRepository is an easy to use software application that truly helps in organizing and managing The Joint Commission readiness efforts. The really neat thing about this software is that it makes it so easy to get all the teams involved in the process. The beauty of MIDAS+ JRepository is that once the PPR is complete, we will use it on an ongoing basis to manage our corrective action plans and monitor our measures of success."
