

## Event Reporting

The daily demands on hospital operations are increasing with expectations to do more with less. Effectively managing risk events in this environment is critical, and MIDAS+ JRepository provides the Event Reporting module to help meet that need.

MIDAS+ JRepository provides a central, secure place for your organization to manage sensitive data and make it readily available to those who need it. The system is flexible, accommodating a variety of event-related information such as adverse drug reactions, intake reports, complaints, and more.

This module includes a root cause analysis feature. This feature helps users validate event information with investigative questions. Any findings designated as a root cause for the event will automatically generate one or more Corrective Action Plans. These Corrective Action Plans are specific to the situation and are designed to minimize future recurrences.

The MIDAS+ JRepository Event Reporting module can leverage valuable event data from MIDAS+ Care Management to enhance the root cause analysis.

Events require a great deal of time and attention. MIDAS+ JRepository provides the workflow to effectively manage them.

### Features & Benefits

- Provide a central location for secure, easy access to event-related information
- Ensure all relevant information is captured by using step-by-step wizards for event, incident, compliant and/or adverse drug reaction records
- Include progress notes, documentation, and related Protected Health Information (PHI) with event information
- Ensure proper research is conducted for events with required investigative questions
- Perform successful mitigation activities and develop strategies to prevent event reoccurrence by following automatically-generated Corrective Action Plans and addressing identified root causes
- Transfer event data seamlessly from MIDAS+ Care Management to MIDAS+ JRepository to facilitate the root cause analysis
