

## Privileging

Use Privileging functionality in MIDAS+ Seeker to manage the process of evaluating providers' clinical competence to perform requested procedures or to treat conditions.

Privileges are granted based on the education, training, and experience of providers who are applying for initial and continued medical staff membership. Privileges must be organization-specific and may consist of a laundry list of procedures, core procedures granted as one, or a combination of both. MIDAS+ Seeker provides comprehensive functionality for all forms of privileging.

MIDAS+ Seeker includes a user-friendly privilege inquiry function accessed with a Web browser. You determine if a password is required, and you can attach a provider photo and any other electronic document to the provider's privileges.

### Features and Benefits

- Flexible privilege entry functionality with separation between major/core definition, added or special request privileges, and excluded privileges, status of each, as well as the start and end dates of each
- Multiple Standard Report options, including reports of provider core privileges with added and excluded privileges, provider individual privileges with excluded privileges eliminated from the list, and privileges listed by the providers who have those privileges
- Digital image functionality for including provider signatures and photos
- Online privilege inquiry displays only a provider's current privileges with the status and start/end dates of each, contact information, proctoring requirements, and provider-specific information for floor nurses

*"Arrowhead Community Hospital implemented MIDAS+ Seeker in 9/2000. Conversion of data from previous software occurred without a glitch! The biggest benefits to our organization are the privileges module; the ease of creating and entering data, and the implementation and availability of the data to all clinical areas. It's current, quick, easy, and provides us compliance to all areas needing to verify provider privileges. This alone has had a tremendous impact on our daily productivity. We love MIDAS+ Seeker!"*
