

Web Access

MIDAS+ Seeker Web access functionality is available as an optional module. Use Seeker Web Access as your one source for accurate provider information and verification and save time and resources with this powerful tool.

Seeker Web Access allows you to customize your page layout to fit with your organization's standards, including adding your organization's logo. You can choose between provider directory information, verification letters, or both. Deploy Seeker Web Access in your existing Web site, or on its own. Seeker Web Access supports single- or multiple-facility organizations.

Provider Directory

MIDAS+ Seeker Web access is your single source for accurate provider directory information. With its user-friendly browser access and customizable search options, the Provider Directory can serve as a physician referral service.

The Provider Directory offers the following features and benefits:

- Optional link to MapQuest® for providers' addresses
- Optional provider photos
- Customizable search options
- Use internally or make available to the public as a physician referral service

Affiliation Verification

Other organizations can query your Seeker Web Access site at their convenience and receive an immediate response, with a formatted verification letter available for printing or downloading.

Seeker Web Access for verification offers the following features and benefits:

- User-friendly browser access
- Provider photos
- Access log feature monitors and records user access
- Secured searches can require the provider's social security number or date of birth
- Other organizations can generate verification letters for providers in good standing

"University Medical Center implemented MIDAS+ Seeker in 1988 and upgraded to the Windows version in 2000. In 2001 we worked with ACS as the alpha test site for Web Access. The implementation of this product has resulted in making a labor-intensive process almost invisible, saving hours previously required to verify medical staff membership—and it has been received with enthusiasm by healthcare organizations who can now query and receive a response at their convenience, not ours. This is the best product yet!"
