

MIDAS+ Seeker is our successful, feature-rich provider information solution. It has everything you need to effectively streamline your data collection and management without paper. Use it with the MIDAS+ Care Management system as a powerful tool for managing provider records, as well as for generating provider activity and performance reports.

MIDAS+ Seeker operates in a client/server or Citrix environment and is ideally suited for multi-user/multi-organization workflows, unlimited reporting, and customized credentialing processes. It automates labor-intensive appointment and reappointment processes and gives you online privilege delineation and inquiry to meet JCAHO/NCQA standards. Whether your office manages provider information for one organization or many, you can use MIDAS+ Seeker to simplify your processes.

More than just for credentialing, MIDAS+ Seeker is a complete clinical provider information management system. Everything you need to do your job is in one package without costly options.

Features and Benefits

- Track graduate medical education information, managed care data, CME and Committee scheduling and attendance, and dues/fees information
- Access real-time online privileging
- Use built-in URLs to streamline verification
- Link digital images, such as scanned photos and documents, to provider data
- Get your daily to-do list automatically as soon as you log on
- Generate SmarTrack Physician Reappointment Profiles for making credentialing decisions and peer review activities
- Compare your database with Office of the Inspector General (OIG) exclusions/reinstatement reports
- Eliminate duplicate IQRS entry on the NPDB Web site using the IQRS Export function
- Use any of hundreds of included Microsoft® Word documents to quickly create letter, label, envelope, or listing documents, or create your own from scratch
- Batch edit provider data quickly and easily
- Use Dictionaries already populated with terms or customize them to suit your needs
- Use MIDAS+ Seeker alone or integrate it with the MIDAS+ Care Management system
- Use outbound interfaces from MIDAS+ Seeker to your facility's HIS system to remove duplicate data entry and provide a single source of provider information
- Collect site-specific data through user-defined fields
- Create and compile reports using a variety of flexible reporting options, including Standard Reports, SmarTrack™ Physician Reappointment Profiles, and ReporTrack™
- Export Standard Reports to many other formats, including Microsoft Word or Excel, HTML, Lotus® 1-2-3®, rich text, and plain text
- Create your own reports with any ODBC-compliant, SQL-based third-party reporting tool including BusinessObjects® Crystal Reports® and Microsoft Access
- Automatically populate mandatory state applications

"We implemented MIDAS+ Seeker in 2000. I was new in the field of Medical Staff Services. I took off with MIDAS+ and really progressed with my implementation of the services in my department. Being a one-person department the benefits that MIDAS+ brings to me are tremendous but the most is productivity. Also being the system manager for the facility, training is a big plus with MIDAS+. The system is very easy to use for staff not familiar with computers but also allows the advanced users to utilize the product to its fullest capability."

Willard, OH*

"MIDAS+ Seeker is a comprehensive database system that completely meets the needs of our credentials verification service and medical staff offices. The credentials files of three separate organizations are well maintained on this system that allows us to run a wide array of standard and customized reports, track all time-limited data elements, query reports electronically, and request primary source verifications in one simple step. The technical support that we receive from the MIDAS+ staff is exceptional, and they are always interested in our ideas for improving their product. I would not hesitate to recommend MIDAS+ Seeker to any of my colleagues."
